

MOTION DETECTOR CAMERA

Abstract of the Disclosure

A motion detector camera including a housing having a mounting member in a
5 bottom surface for mounting the housing to a tripod, the housing having an film
advance mechanism for automatically advancing a film of the camera after each
exposure. The camera includes a wide angle lens attached to a front surface of the
housing, a motion detector attached to a front surface of the housing, and a flash
attached to the housing and having a range of at least 23 feet. The camera also
10 includes a controller for controlling the flash and a shutter of the camera, wherein the
controller receives a signal from the motion detector indicating a triggering event and
the controller causes the flash to flash if necessary and causes the shutter to form an
exposure on the film.
